An especially important application of detectable invisible ink is in automatic identification systems, and especially "netpage" and "Hyperlabel™" systems. Netpage systems are described in the following patent applications, all of which are incorporated herein by reference.

In general, the netpage system relies on the production of, and human interaction with, netpages. These are pages of text, graphics and images printed on ordinary paper, but which work like interactive web pages. Information is encoded on each page using ink which is substantially invisible to the unaided human eye. The ink, however, and thereby the coded data, can be sensed by an optically imaging pen and transmitted to the netpage system.
